

## Our sustainability policy

### Mobility with zero emissions

We are going for carbon-neutral mobility. **We are doing this by using non-fossil fuel, and electricity from sustainable sources, by managing the growth in our fleet of vehicles and also by managing the number of trips.** We also aim to be smarter in using our return flows, in order to maximise the loading percentage. We wish to involve our partners in this process as much as possible.

### Mission-driven innovation policy

**Within HMF&S, we include social missions in our innovation policy.** We are up to date with the latest developments, listen closely to customers' questions and are proactive towards impending changes relating to sustainability. **A point of attention in our innovation policy is circular business. We will also focus on developing products and services which contribute to reducing our customers' carbon footprint.**

### Circularity

We must be careful with our use of precious raw materials. After all, they are in limited supply. This is why circularity is a high priority at Heras Mobile Fencing & Security. **We wish to continue creating circular processes within our organisation.** A part of this task is our mission-driven innovation policy. **We will also make efforts to use less primary raw materials in our production processes in the future.**

### Sustainable supply chain

HMF&S respects the 'zand tot klant' (sand to customer) principle: covering raw materials all the way to finished products/installation and service of delivered products. **We aim for a sustainable supply chain.** Our partners are an essential part in achieving corporate social responsibility. **In the coming years, we aim to move from product-orientated procurement to process-orientated procurement, and from accountability to social responsibility.**

### Internal system integration

The reduction of CO<sub>2</sub> emissions is an important topic within HMF&S. **For this reason our factories will work as much as possible with renewable energy sources.**

### Implementation of NEN ISO 14001

**Certification for the NEN ISO 14001 means these are more than just words.** These are specific objectives. Furthermore, thanks to the integrated Plan-Do-Check-Act principle, we keep a close and regular eye on our results. **In doing so, we ensure continuous improvement.**

### Net balance of climate neutrality

In order to be carbon neutral as a company, there must be a balance between the emissions and absorption of CO<sub>2</sub>. **HMF&S aims to minimise CO<sub>2</sub> emissions, both internally and within the chain.** Any remaining emissions will be compensated as much as possible. For example, by investing in renewable energy, energy efficiency and with clean, low-carbon technologies.
